- (4) Linux Client / Windows Server

# (1) Linux Client / Linux Server

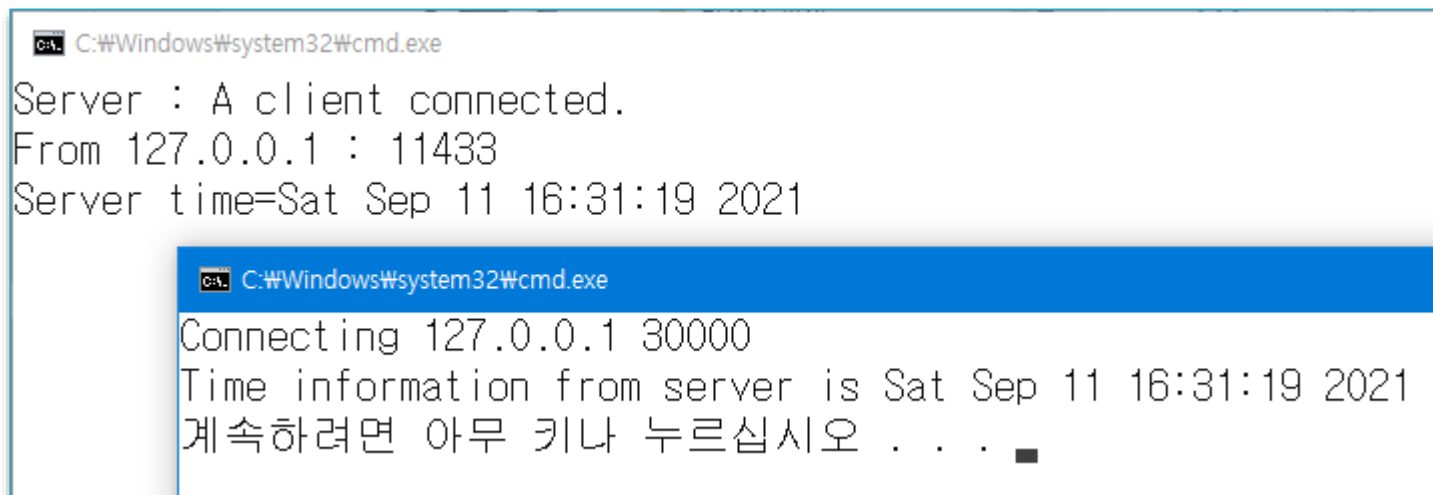

The screenshot shows a VMware Workstation 15 Player window titled "Ubuntu 64-bit-NAT - VMware Workstation 15 Player (Non-commercial use only)". Inside the VM, the Ubuntu desktop environment is visible. A terminal window is open, displaying the following commands and output:

```
user@user-virtual-machine: ~/netprog/03
user@user-virtual-machine:~/netprog/03$ ls
Makefile      time_client  time_server.c  udp_time_server
NetP-03.zip   time_client.c  udp_time_client  udp_time_server.c
NetP03-linux.zip  time_server  udp_time_client.c
user@user-virtual-machine:~/netprog/03$ ./time_server
Server : waiting connection request
Server : A client connected.
From 127.0.0.1 : 35712
Server time=Sat Sep 11 16:06:21 2021
user@user-virtual-machine:~/netprog/03$ ./time_client
Time information from server is Sat Sep 11 16:06:21 2021
user@user-virtual-machine:~/netprog/03$
```

Yellow boxes highlight the file listing and the execution of both `./time_server` and `./time_client` in the terminal.

## (2) Windows Client / Windows Server

- ▶ wtime\_server [30000]
- ▶ wtime\_client [127.0.0.1] [30000]

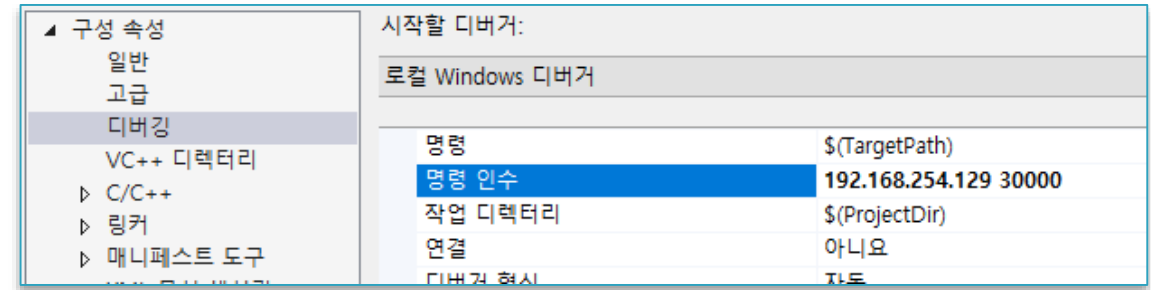

The image shows two overlapping Windows command prompt windows. The background window is titled 'C:\Windows\system32\cmd.exe' and displays the output of the wtime\_server program: 'Server : A client connected.', 'From 127.0.0.1 : 11433', and 'Server time=Sat Sep 11 16:31:19 2021'. The foreground window, also titled 'C:\Windows\system32\cmd.exe', displays the output of the wtime\_client program: 'Connecting 127.0.0.1 30000', 'Time information from server is Sat Sep 11 16:31:19 2021', and a Korean prompt '계속하려면 아무 키나 누르십시오 . . . ' followed by a cursor.

```
C:\Windows\system32\cmd.exe
Server : A client connected.
From 127.0.0.1 : 11433
Server time=Sat Sep 11 16:31:19 2021

C:\Windows\system32\cmd.exe
Connecting 127.0.0.1 30000
Time information from server is Sat Sep 11 16:31:19 2021
계속하려면 아무 키나 누르십시오 . . . █
```

### (3) Windows Client / Linux Server

- ▶ Linux time\_server
  - ./time\_server 30000
- ▶ Window wtime\_client
  - wtime\_client 192.168.254.129 30000

```
user@user-virtual-machine: ~/netprog/03
ls
Makefile      time_client  time_server.c  udp_time_server
NetP-03.zip   time_client.c  udp_time_client  udp_time_server.c
NetP03-linux.zip time_server  udp_time_client.c
user@user-virtual-machine:~/netprog/03$ ./time_server
Server : waiting connection request.
Server : A client connected.
From 127.0.0.1 : 35712
Server time=Sat Sep 11 16:06:21 2021
Server : A client connected.
From 192.168.254.1 : 2358
Server time=Sat Sep 11 16:08:32 2021

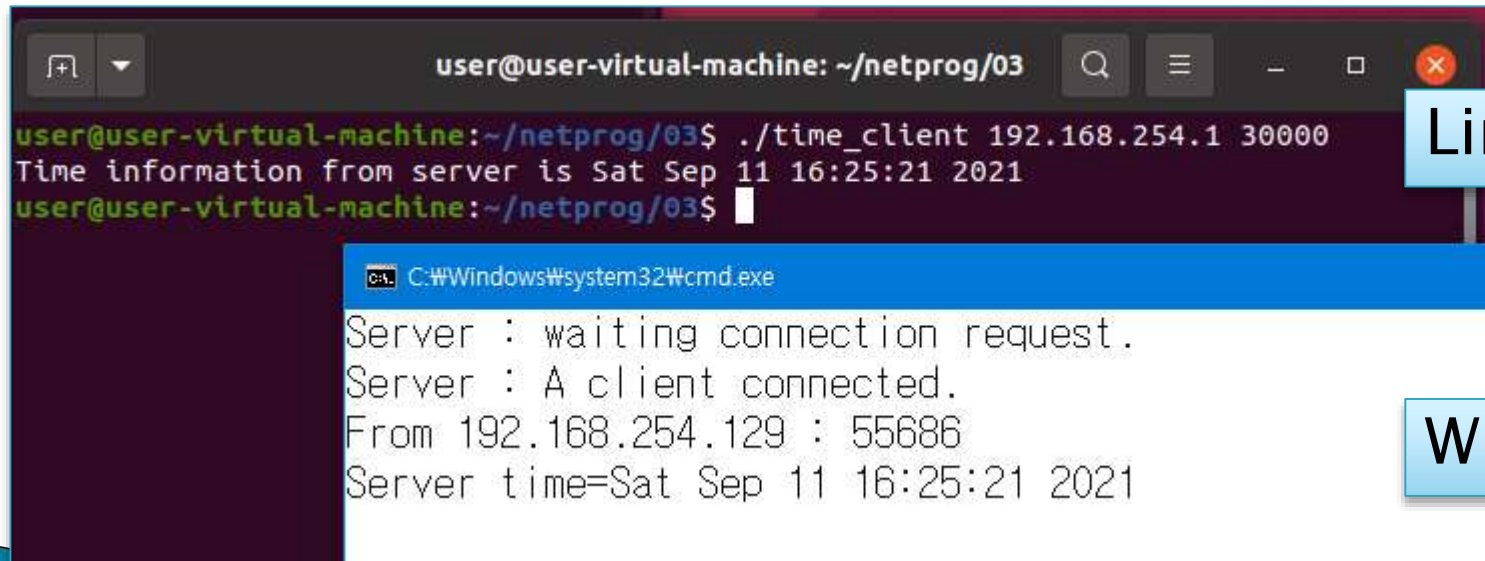

C:\Windows\system32\cmd.exe
Connecting 192.168.254.129 30000
Time information from server is Sat Sep 11 16:08:32 2021
계속하려면 아무 키나 누르십시오 . . .
```

Linux Server

Window Client

## (4) Linux Client / Windows Server

- ▶ Linux time\_client
  - `./time_client 192.168.254.1 30000`
- ▶ Window wtime\_server
  - `wtime_server`

The image shows two overlapping terminal windows. The top window is a Linux terminal with a dark background, titled 'user@user-virtual-machine: ~/netprog/03'. It shows the execution of the command `./time_client 192.168.254.1 30000`, which results in the output 'Time information from server is Sat Sep 11 16:25:21 2021'. The bottom window is a Windows command prompt with a light blue title bar, titled 'C:\Windows\system32\cmd.exe'. It shows the output of the `wtime_server` command: 'Server : waiting connection request.', 'Server : A client connected.', 'From 192.168.254.129 : 55686', and 'Server time=Sat Sep 11 16:25:21 2021'.

```
user@user-virtual-machine: ~/netprog/03
user@user-virtual-machine:~/netprog/03$ ./time_client 192.168.254.1 30000
Time information from server is Sat Sep 11 16:25:21 2021
user@user-virtual-machine:~/netprog/03$

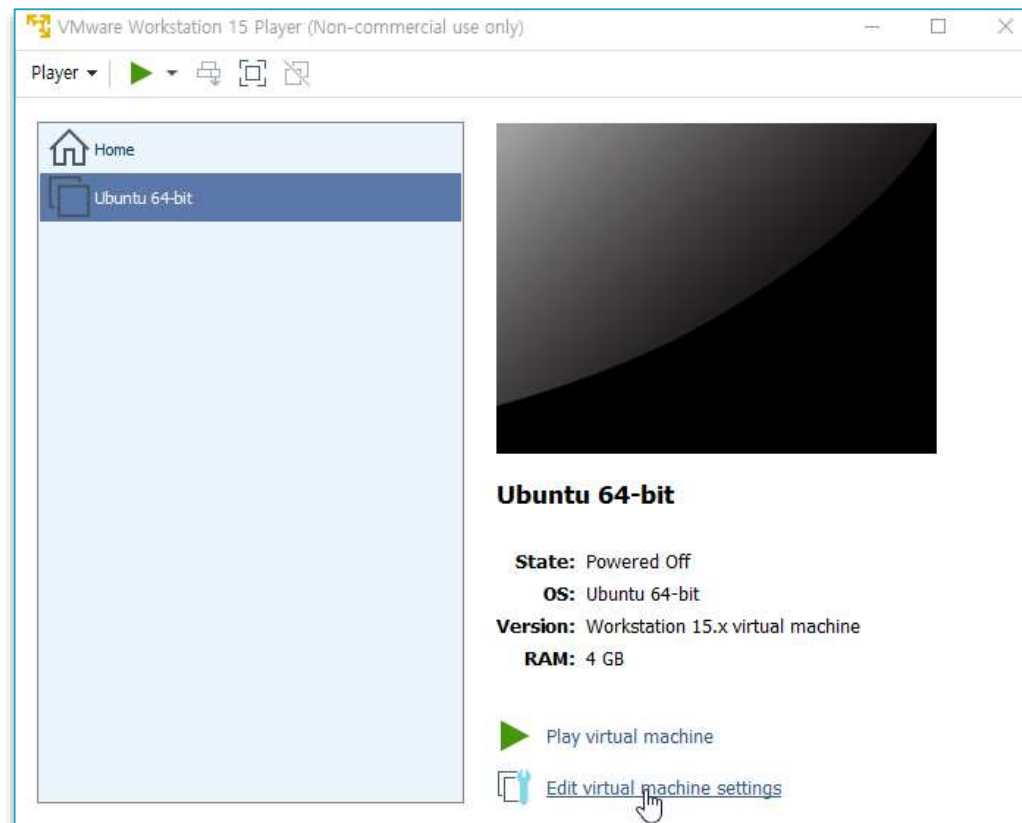

C:\Windows\system32\cmd.exe
Server : waiting connection request.
Server : A client connected.
From 192.168.254.129 : 55686
Server time=Sat Sep 11 16:25:21 2021
```

Linux Client

# Linux 용 wireshark 설치

1. `sudo add-apt-repository ppa:pi-rho/security`
2. `sudo apt-get update`
3. `sudo apt-get install wireshark`
4. `sudo dpkg-reconfigure wireshark-common` (YES 선택)
5. `sudo usermod -a -G wireshark $USER`
6. `gnome-session-quit --logout --no-prompt`
7. 시스템 재시작 Vmware Linux Restart
8. `sudo setcap 'CAP_NET_RAW+eip CAP_NET_ADMIN+eip' /usr/bin/dumpcap`
9. 시스템 재시작 Vmware Linux Restart

# Linux Wireshark 설치 (1)

linux mint(ubuntu)에 wireshark 설치 (ppa) | Mint / Linux

2014. 3. 31. 20:00

<https://blog.naver.com/undersky03/207279210> [복사](#)

[번역하기](#)

민트에 내장 되어 있는 소프트웨어 센터에도 wireshark가 있으나.. 버전이 낮은 이유로...  
ppa를 찾았다.

wireshark 홈페이지에 있는 걸 설치하려면.. 의존성 문제로 매우 귀찮고.. (사실 잘 알아 보지도 않았다.)

```
sudo add-apt-repository ppa:pi-rho/security
```

```
sudo apt-get update
```

```
sudo apt-get install wireshark
```

적힌대로 실행하면 wireshark가 설치 된다.

추가적으로 linux에서는 wireshark를 그냥 실행 할 경우에 네트워크 인터페이스를 찾지 못해 캡처가 되지 않는다.  
권한 문제로써.. 일반 user에서 실행이 가능 하도록 하려면 다음과 같이 입력한다.

```
$ sudo apt-get install wireshark
$ sudo dpkg-reconfigure wireshark-common
$ sudo usermod -a -G wireshark $USER
$ gnome-session-quit --logout --no-prompt ( 혹은 재로그인 )
```

gnome-sesseion-quit 실행시 모든 창 꺼진 후 재기동 되므로 조심하자.

## 설치 후 **Vmware Linux Restart**

# Wireshark 설치 (2)

- ▶ (1) 까지 해도 안되는 경우 아래 내용을 추가하고 **Vmware Restart**

2010. 8. 20. 16:10

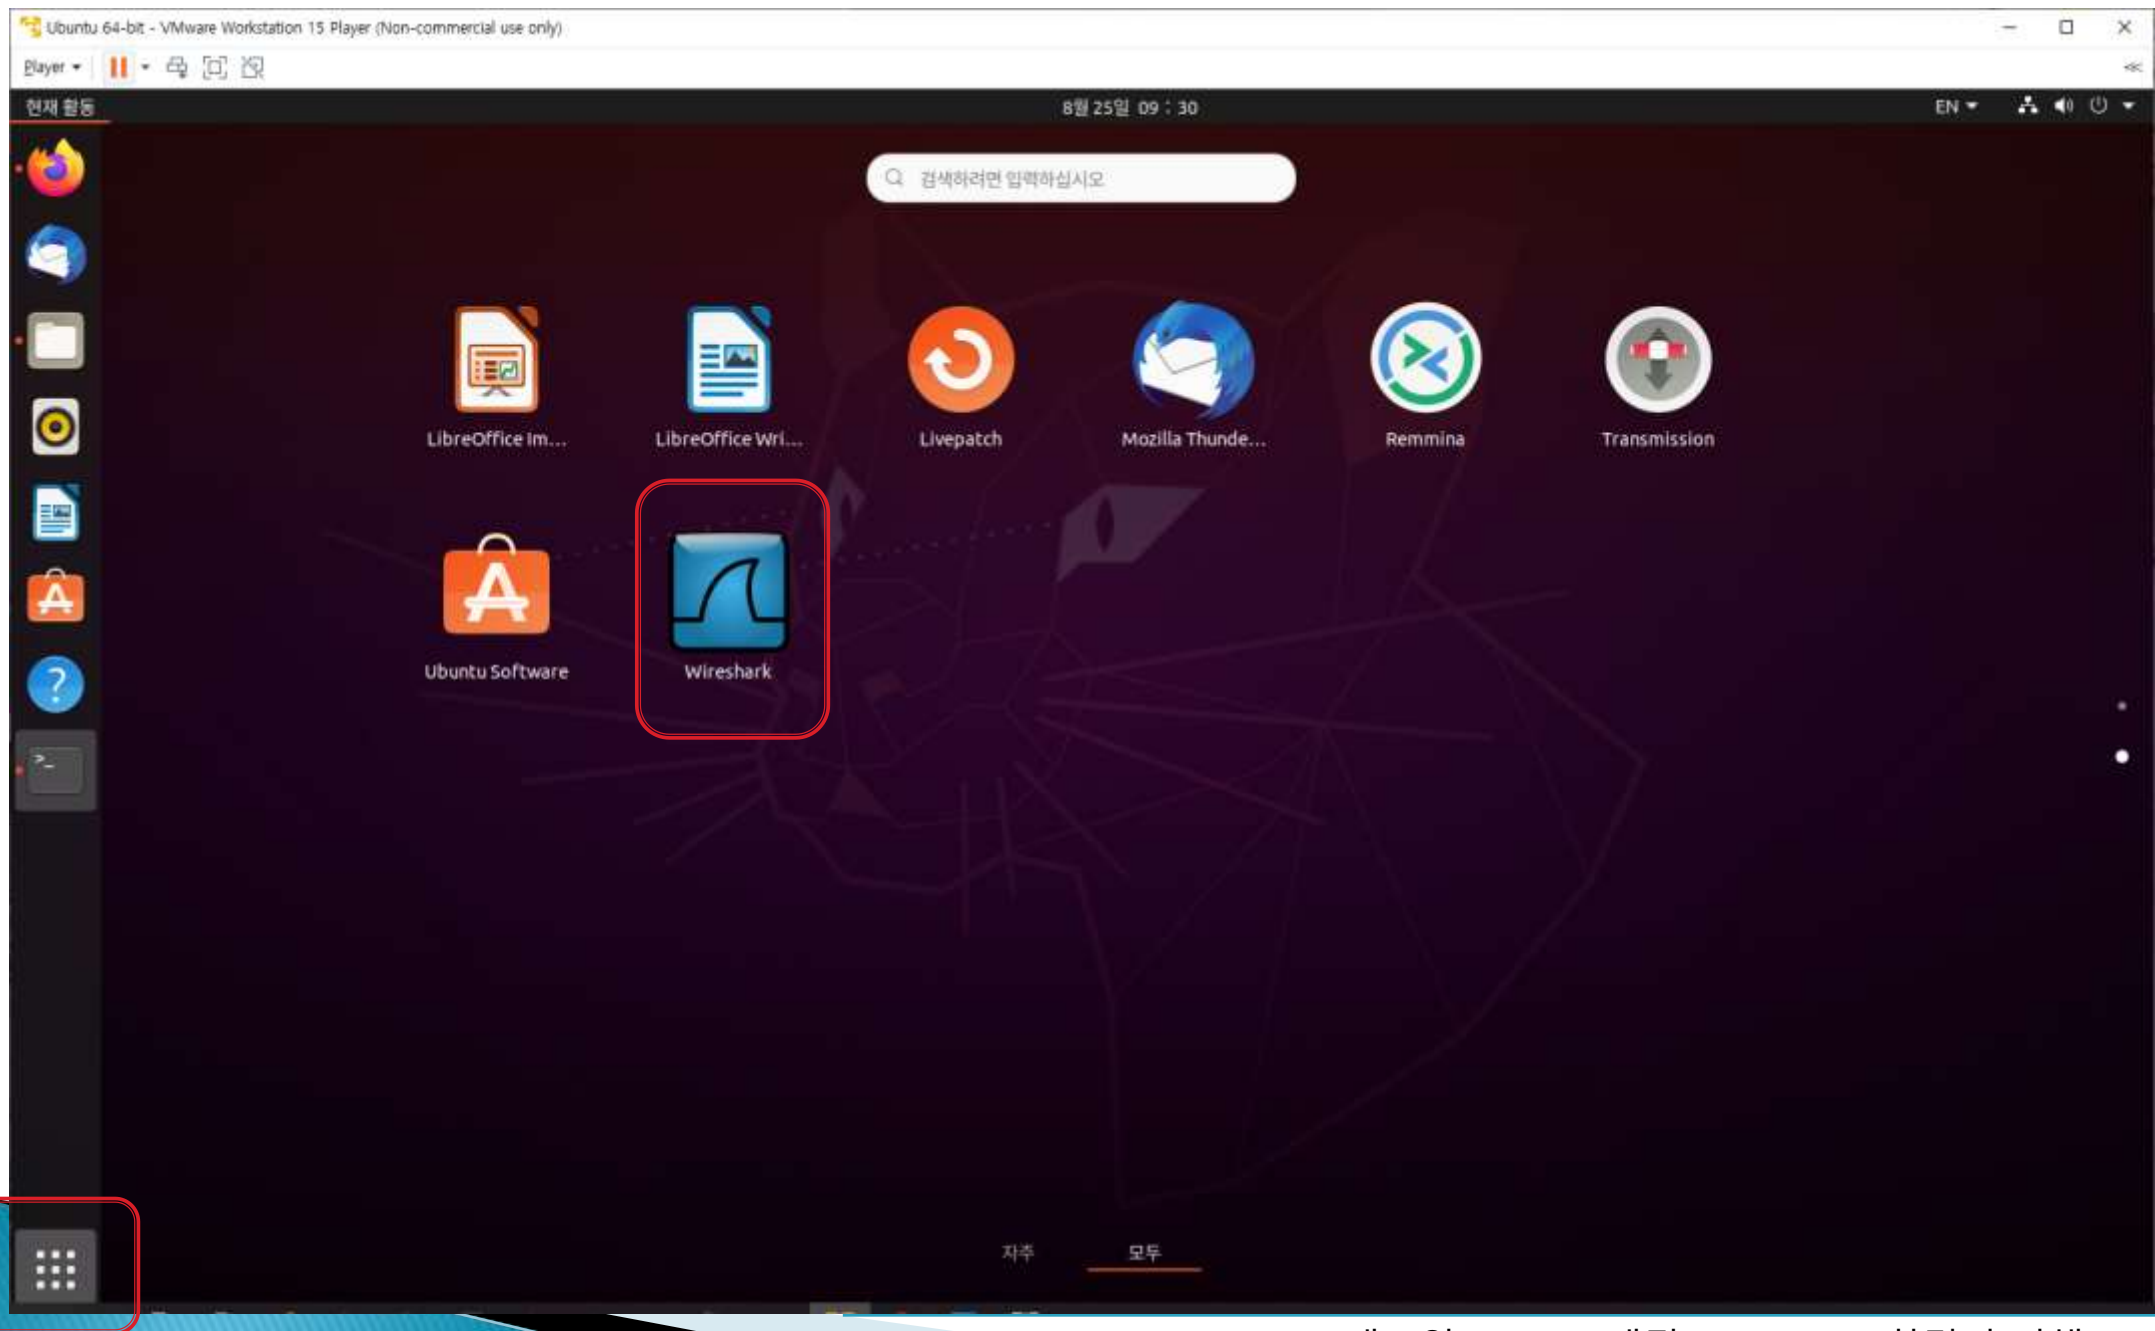

리눅스에서 Wireshark 실행시 인터페이스가 나타나지 않는 문제는, Wireshark 가 인터페이스에 직접 Access할 수 없기 때문이라고 합니다.  
보안상의 문제로 Root로 작업하는 것을 권장하지 않는다고 하며,  
dumcap 에 대하여 네트워크 권한을 지정해주면 해결할 수 있다고 하네요.

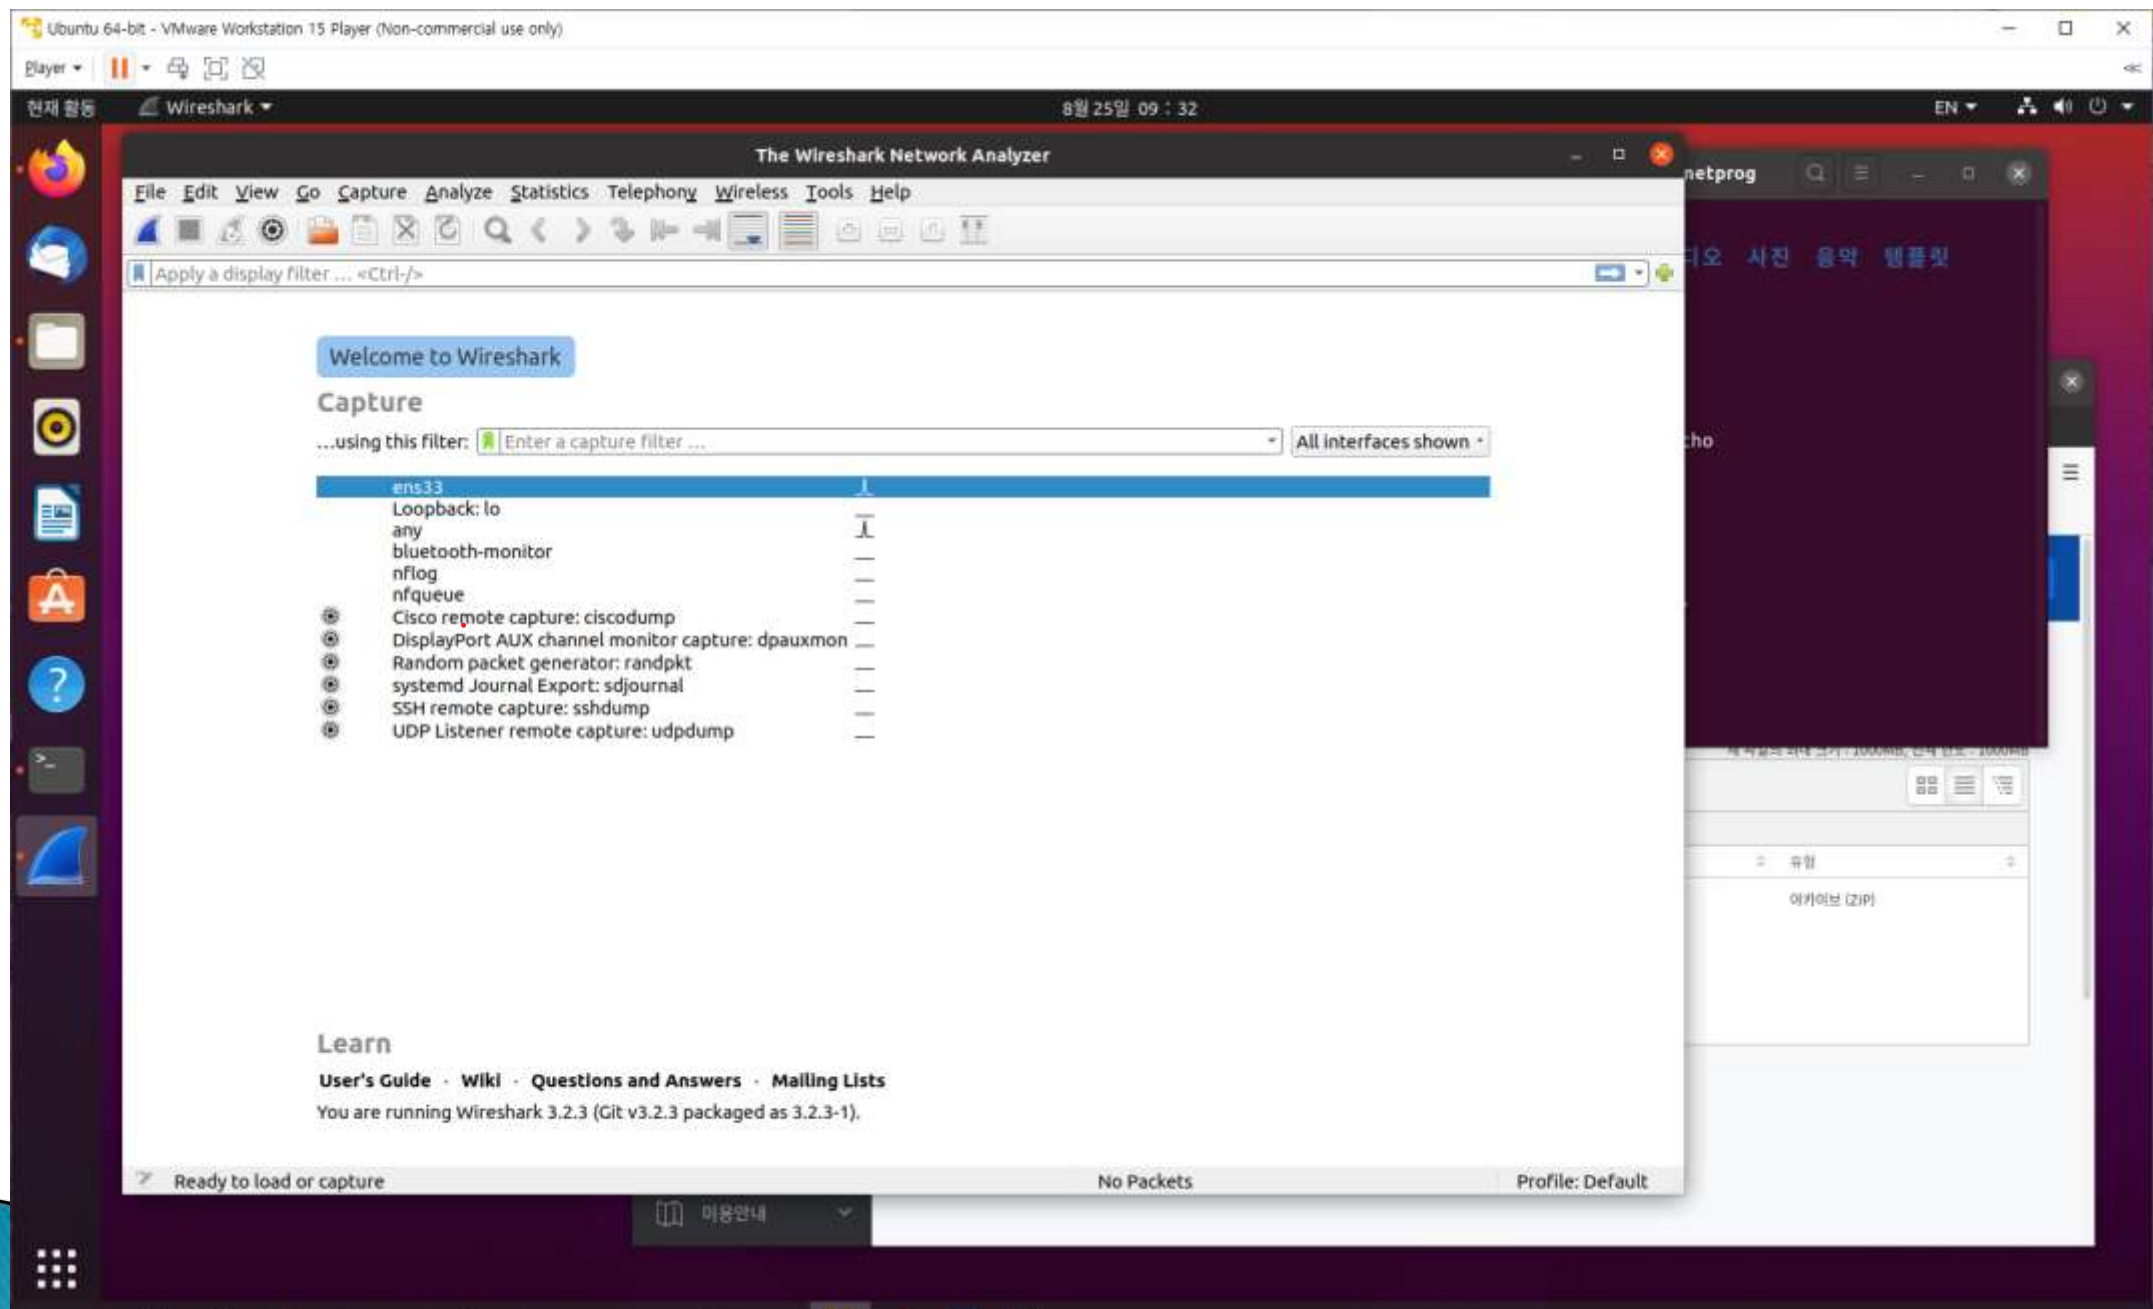

<http://wiki.wireshark.org/CaptureSetup/CapturePrivileges>

간단하게 리눅스에서

아래 명령만 실행시키면 된다고 합니다. ^^

```
user@ubuntu:~$ sudo setcap 'CAP_NET_RAW+eip CAP_NET_ADMIN+eip' /usr/bin/dumpcap
```

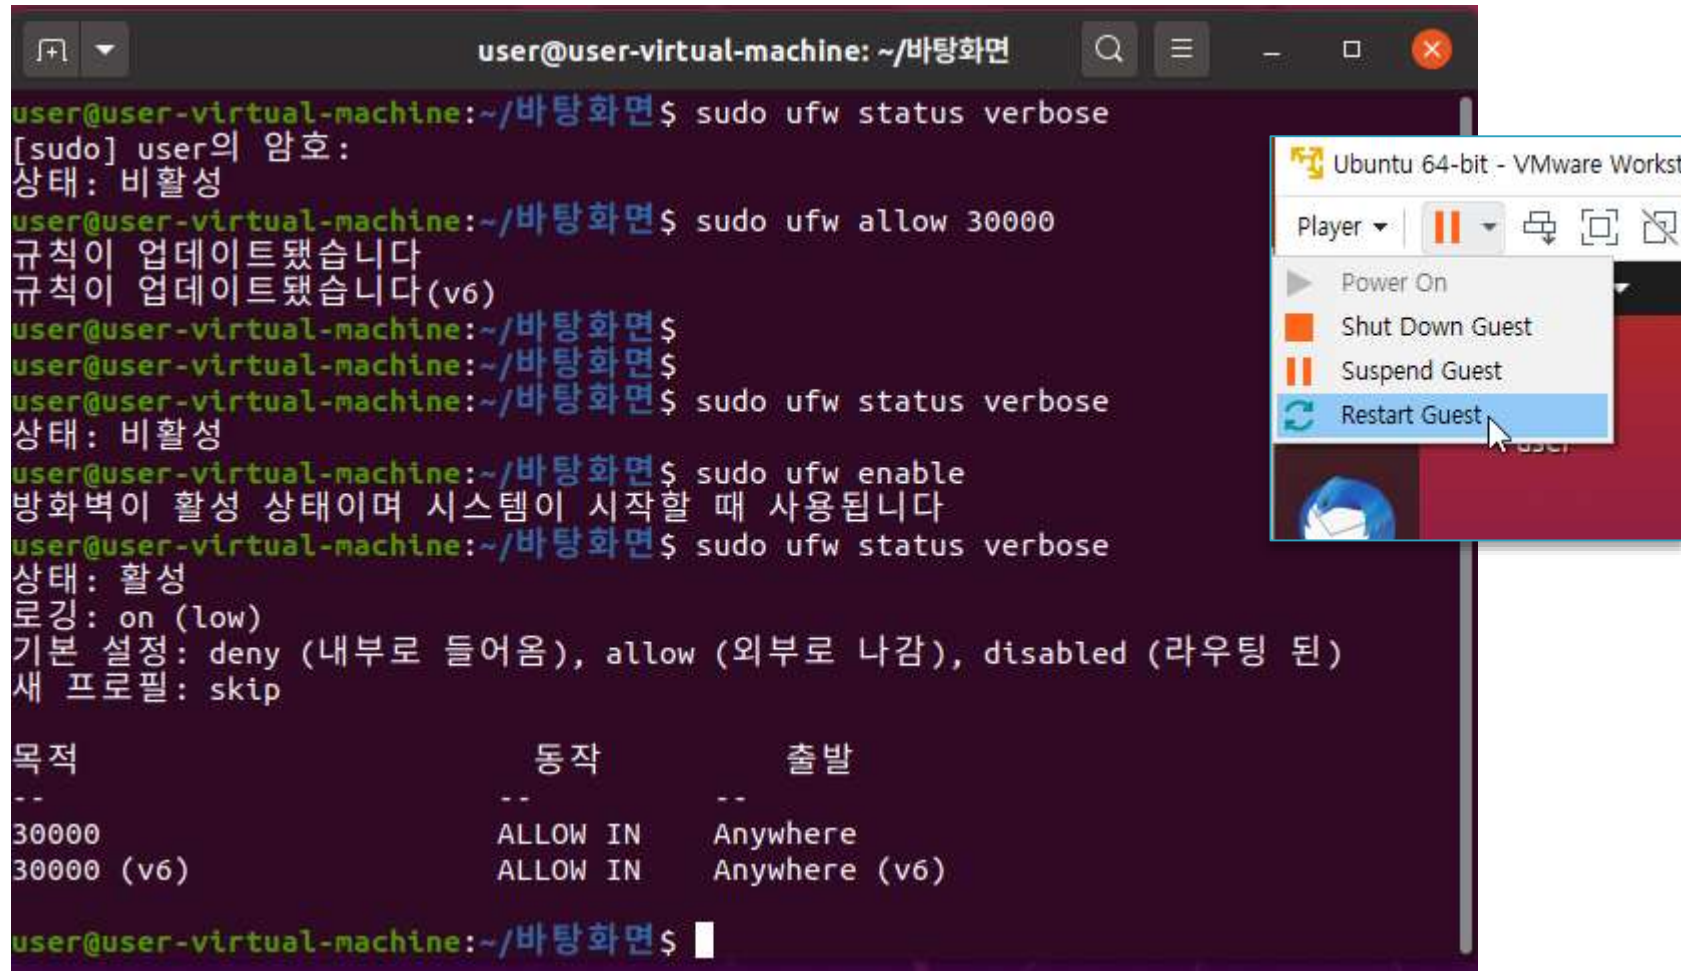

# Linux 방화벽 설정 / Restart
